

De-icing

Saver

Lower your costs and minimise delays with our proven aircraft de-icing forecasts

AIRFRAME ICING IS ONE OF THE MOST COMMON CAUSES OF WINTER DELAYS AND UNNECESSARY COSTS.

With increased economic pressures and customer demands, planning for the weather can reduce de-icing costs and keep you ahead of the competition.

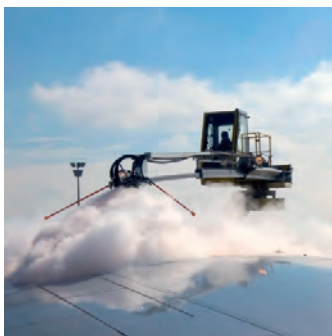

Whatever the winter weather conditions, our Aircraft De-icing Service™ is proven to give accurate forecasts of icing events up to five days ahead, helping you to reduce aircraft icing costs and delays.

We can take the pressure and confusion out of deciding whether to de-ice your aircraft. With 98% accuracy, the service is proven to be cost effective, saving you up to 30% on your de-icing costs.

The Met Office has been forecasting the weather for over 150 years. We're one of two World Area Forecast Centres and are also contracted by the Civil Aviation Authority under Single European Skies to provide low-level forecasts for the UK.

Our unrivalled accuracy and aviation expertise means that leading airlines such as bmi and British Airways choose to use our Aircraft De-icing Service™.

A PROVEN SERVICE THAT SAVES MONEY AND MINIMISES DELAYS

In turbulent economic times, identifying any savings are important without jeopardising safety or customer satisfaction. By understanding and efficiently managing your aircraft de-icing operations through our Aircraft De-icing Service™, you can reduce costs by up to 30% and delays by up to 85%.

Our Aircraft De-icing Service™ is a decision-making tool that gives clear and controlled instructions. It provides all the relevant icing information online, as well as optional alerts of deteriorating weather or instructions to de-ice sent directly by email or mobile phone.

ON TARGET

Site-specific forecasts for any airport in the world, offering a flexible service tailored to your operations.

ON DEMAND

Alerts of deteriorating conditions can be sent directly to your operations team or de-icing supplier by text message and email.

ONLINE

An easy-to-use web interface summarises the icing conditions for the next five days, enabling efficient resource planning through:

- An at-a-glance five day summary of icing conditions.
- Detailed 24-hour graphs showing the dewpoint, temperature and type of weather, including frost, snow and freezing rain.
- Forecast hold-over graphs showing hold-over times for different fluids, throughout the next 24 hours.

ON DUTY

Or you can speak directly with one of our aviation forecasters who are ready to take your call 24 hours a day.

Lower your costs and minimise delays with our proven aircraft de-icing service™

For more information or to arrange a demonstration, please call our 24 hour customer centre on 0870 900 0100 or +44 (0)1392 885680 or email aviation@metoffice.gov.uk
